

University of Vavuniya

First Examination in Information Technology - 2019

First Semester - December 2020/January 2021

Held on October/November 2021

IT1152 Essentials of Statistics

Online Examination

Question-Set 1 of 2

- Allowed Time: **30 Minutes**
- Answer **all** questions
- This is a closed-book examination
- Non-programmable calculator is allowed to be used

-
1. (a) The following data set represents the number of new computer accounts registered during ten consecutive days (Treat data as a population).

43 37 50 51 58 105 52 45 45 10

Calculate the mean, variance, and standard deviation.

[40%]

- (b) During some construction, a network blackout occurs on Monday with probability 0.7 and on Tuesday with probability 0.5. Suppose there is a probability of experiencing network blackouts on both Monday and Tuesday is 0.35. What is the probability that there is no blackout on Monday or Tuesday?

[20%]

- (c) Ninety percent of flights depart on time. Eighty percent of flights arrive on time. Seventy-five percent of flights depart on time and arrive on time. You are meeting a flight that departed on time. What is the probability that it will arrive on time?

[20%]

- (d) A computer program consists of two blocks written independently by two different programmers. The first block has an error with a probability of 0.2. The second block has an error with a probability of 0.3. If the program returns an error, what is the probability that there is an error in both blocks?

[20%]

Question-Set 2 of 2

- Allowed Time: **30 Minutes**
- Answer **all** questions
- This is a closed-book examination
- Non-programmable calculator is allowed to be used
- Required statistical tables are attached herewith

-
2. (a) A computer maker receives parts from three suppliers, S1, S2, and S3. Fifty percent come from S1, twenty percent from S2, and thirty percent from S3. Among all the parts supplied by S1, 5% are defective. For S2 and S3, the portion of defective parts is 3% and 6%, respectively. A customer complains that a certain part in her recently purchased computer is defective. What is the probability that it was supplied by S1? [25%]
- (b) A computer virus attacked a lab network consisting of 20 computers. This virus enters each computer with probability 0.4, independently of other computers. Find the probability that it entered at least four computers. [25%]
- (c) Customers of an Internet service provider initiate new accounts at the average rate of 5 accounts per day. What is the probability that more than four new accounts will be initiated on a particular day? [25%]
- (d) A computer software package generates random numbers that are normally distributed with a mean and standard deviation that are entered by the user. Suppose that the user enters a mean of 400 and a standard deviation of 100. Find the probability that a value will be between 340 and 714. [25%]

Table entry for z is the area under the standard normal curve to the left of z .
